

## Synthesis

**Synthesis track** A total of 7,5m (24') can be connected to one transformer. The track can easily be connected with either mechanical or electrical joiners. The recommended maximum distance between the fixings is 1,2m (4').

**Synthesis transformers** are supplied with a thermal overload switch and a fuse. The 'Connector transformer' can also be used as a fixing point in combination with Pendant rod 100mm.

**Synthesis DC transformers** use advanced HF techniques to feed tracks with direct current up to 7.5m (24'). The soft start unit and the secondary voltage stabilisation provides longer lamp life cycles up to 50%. These types of transformers can be dimmed virtually noiseless. Advised dimmer type are trailing edge dimmers

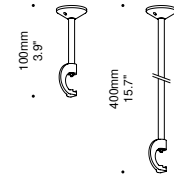

- ▷ HF power feeding up to 7.5m (24')
- ▷ noiseless dimming with normal trailing edge dimmers
- ▷ short circuit & overload protection
- ▷ soft start unit and secondary voltage regulation
